

# SIMON™ SAYS

## THE SIMPLICITY OF AN AGC IS NOW AFFORDABLE.

### Introducing Simon™

Simon is an Automatic Guided Cart (AGC). An AGC is smaller, more compact and less expensive than Automated Guided Vehicle (AGV) but capable of performing similar transport tasks with a smaller footprint. Battery operated with an optical guided system makes Simon easier to install and the project payback much faster.

Simon, with its unique control features, can perform simple from/to transport tasks as well as complex routing assignments such as sideways, diagonal or rotational movements up to 360 degrees. Simon is programmable and configurable to travel where you want. Give Simon the tasks to perform; pick up or deliver loads, slow down or speed up, reverse or make a complete about-face.

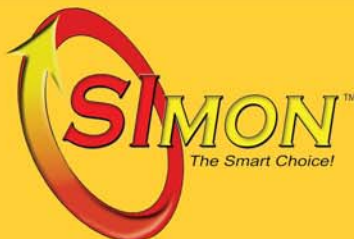

Simon is an ideal alternative to conventional package or pallet conveyor, power and free, monorail or fork trucks. Simon is simply providing a revolutionary way to transport loads and is aligned with lean manufacturing and flexible distributions objectives.

Call today and learn how Simon can deliver revolutionary technology to your material transport requirements.

#### Quick Simon Facts:

- Affordable
- Battery operated
- Optical Guidance System
- Flexible
- Compact
- Onboard setup
- Solitary or Fleet
- Point to Point or Route driven
- Stand alone or WIFI
- 360° rotations
- Reverse
- Customizable
